### 3 Surprising Revelations in Huijue's Latest Filings

#### Cash Flow That's (Almost) as Reliable as Their Batteries

Huijue's 2023 reports show a 34% YoY increase in operating cash flow - not bad for a company investing heavily in solid-state battery R&D. Remember when everyone said lithium-ion was the final frontier? Huijue's CFO apparently didn't get that memo.

#### The "Stealth" Government Contracts You Might've Missed

Buried in Note 17 of the annual report: a \$200M partnership with Singapore's Energy Market Authority for grid-scale storage solutions. This isn't just pocket change - it's validation of their thermal runaway prevention technology that's hotter than a Kardashian TikTok right now.

#### Inventory Days: From 68 to 42 in 12 Months

Translation: They're moving product faster than a street vendor during monsoon season. This supply chain wizardry explains how they've maintained 22% gross margins despite raw material price swings.

#### Energy Storage Trends Making Accountants Swoon

The industry's shift toward second-life battery applications isn't just eco-friendly - it's creating new revenue streams that show up in unexpected places. Huijue's "Battery ReX" program contributed \$47M in FY2023, up from \$12M two years prior. That's like turning old flip phones into gold mines!
